Infrared Electrical Inspections

Using cutting-edge infrared detection technology, our Certified Thermographers rapidly and accurately pinpoint the thermal anomalies that threaten the safety and reliability of your electrical systems.

Because thermography is non-contact and nondestructive, there is no need to interrupt production or plan for costly shutdowns. Our thermographers inspect your equipment under normal loads and operating conditions, so you don't have to disrupt your service and production schedules. By performing an infrared scan of your electrical system in 'real time' our inspections can help you understand the practical impacts of emerging component problems.

Infrared Electrical Inspections

Today's facilities engineers are saving millions of dollars every year with infrared electrical surveys. An infrared electrical scan can substantially improve profitability and reduce your operating, testing and maintenance costs by:

- quickly pinpointing problems
- reducing downtime and equipment damage
- preventing catastrophic failures
- establishing repair priorities
- improving preventive maintenance efficiency
- testing under load to avoid costly shutdowns

Thermal imaging is a valuable enhancement to any proactive asset protection and maintenance program. Where investment is cost prohibitive, outsourcing infrared surveys is an affordable alternative to the purchase, upkeep and inevitable upgrade of thermo graphic hardware and software. By outsourcing to Gratton Infrared Services, you will not need to purchase any additional equipment, supplies, or receive special training to get started.

Contact us today to find out how Gratton Infrared Services can deliver this exciting service and technology to your location and help to shift resources away from costly downtime, scheduled maintenance and into the more value added activities that represent a true Predictive Maintenance program.
